	Urgent	**Not Urgent**
Important	Do: ● Build a dataset for each player in the top-5 leagues by season, including their stats and trophies. ● Give each player a probabilistic score of winning between 0 to 1. ● Rank all players based on their score. Top 30 get nominated, top 1 wins. ● Show top factors that contributed to each score.	Schedule: ● Build a GUI for a website. ● Add advanced statistical metrics like xG. ● Account for players that fall outside the top 5 leagues, but are still exceptional (e.g., Messi).
Not Important	Delegate: ● Use public sources for data for each player, on their stats, trophies, and Ballon d'Or results. ● Use the Statistical Machine Intelligence & Learning Engine (SMILE) library. ● Use Jackson library for parsing.	Delete: ● Social media data to show public perception and narratives ● Betting features. ● Neural Networks.
